

What is a Backup Analysis?

Our security specialist will come on site and...

- Audit your current data backup and security procedures, including tape rotation and maintenance schedule, to see if ALL of your data really is being backed up in a secure manner, and in a format that can easily be restored.
- Audit your current offsite backup system and provider to see if they can *guarantee* you a fast, safe recovery of your data – there are actually 5 key characteristics and systems to demand from any offsite backup company; if they don't meet every one, you're in for a big, unpleasant surprise if you ever have to do a major restore and rebuild of your server and network.
- Review your current procedures for onsite backups. Many people don't realize they damage their disks (and thereby corrupt their data) by improperly caring for their storage devices.
- Present a simple and easy to understand chart that will detail the makeup of your data, including the age and type of files you are backing up. Why should you care? Because many companies inadvertently use valuable computer storage to back up their employees' personal MP3 files and movies.
- Discuss current data protection needs and explain in plain English where your risks are. We know everyone has a different level of risk tolerance, and we want to make sure all the risks you're taking with your data are by choice not because of miscommunication or accident.

Depending on what we discover, we'll either give you a clean bill of health or reveal gaps in your data backup that could prove disastrous.

If it's appropriate, we'll provide you with a "complimentary" **recovery action plan** for further securing your business with **Complete Data Protection** by Domain Technology Group.

But I Don't Need a Backup Analysis Because We Have it Covered...

Maybe you don't feel as though you have an urgent problem that needs to be fixed immediately. Maybe you think your data is perfectly safe. Many of our current clients felt their data was safe until it became necessary for them to RESTORE THEIR DATA.

Unfortunately, that is when most companies "test" their data backup and restore solution. We are dedicated to helping companies like yours AVOID embarrassing and extremely costly data catastrophes.
